RE: Infiltration/Inflow Preventive Measure
West Ouachita Sewerage District No. 16
L & A, Inc. Project No. 15E014.00

Dear Jerry:

The Ouachita Parish Police Jury serving as the Board of Commissioners for West Ouachita Sewerage District No. 16 (WOSD No. 16) approved the requirement of Sewer Sentry Inserts or Approved Equal in all sewer manholes within the limits of WOSD No. 16. The action was taken at the regular scheduled Police Jury Meeting on February 2, 2015.

After discussion with you, WOSD No. 5 and the industry representative, the Sewer Sentry Inserts have greatly reduced the inflow into the gravity systems where they have been installed. By reducing the inflow, there are several benefits that will be realized over the lifetime of the sewer system such as reduction of electrical costs, reduction of wear and tear on the pump stations, increase capacity within the system for future development, reduction of overflows into ditches, etc. The inserts also provide a means for the system to ventilate which greatly reduces the sewer gases that corrode and destroy manholes, lines and pumping equipment.

It is my understanding WOSD No. 5 Board of Commissioners approved this requirement for their system at their Board Meeting on December 8, 2014. As the Engineer for WOSD No. 16, please also include this requirement in your reviews. I am copying a representative with the local engineering firms with this letter so they are aware of the new requirements and am also attaching a copy of the details to be used in their future plans. The information attached is for Sewer Sentry Inserts. If an Approved Equal is submitted, please review on behalf of WOSD No. 16 to insure all requirements are met.

Should you have any questions, or wish to discuss this transmittal in detail, please feel free to contact me.

Sincerely,

LAZENBY & ASSOCIATES, INC.

Kevin E. Crosby, P.E., P.L.S.
Parish Engineer
