RE: City of Monroe  
North Area Sewer System Improvements –  
Basin MR-27(A)/30/31 Rehabilitation  
Sewer Sentry Installations  
DE Project No. 09-11-01

To Whom It May Concern:

Earlier this year, JABAR Corporation was contacted by the City of Monroe to install Sewer Sentries on manholes in the aforementioned sewer basin in the Point Drive/Bayou Lane lift station area and the Forsythe Avenue/Timber Lane Drive lift station area. Based on my observations and my conversations with the sewer superintendent, these areas have seen significant reduction in inflow because of the Sewer Sentries. The City has seen reductions in both sewer system overflows and reductions in lift station pump run times since the Sewer Sentries were installed. For these reasons, we believe the Sewer Sentries were a good investment for the City. These devices will continue to be installed in the City's sewer system to help reduce inflow.

Should you have any questions or need any additional information, please contact me at any time.

Sincerely,

DENMON ENGINEERING

CHRIS W. PATRICK, P.E.
