

Revitalizing Infrastructure: A Spray-In-Place Pipelining Jobsite Visit Success Story

Near Orlando, Florida, multiple projects were underway to rehabilitate the aging sewer system using IPP Solutions' spray-in-place pipelining technology. This innovative method promised to extend the life of the pipes without the need for extensive excavation, minimizing disruption to homeowners. [APEX-CIPP](#) and IPP Solutions organized a jobsite visit to showcase this cutting-edge technology to aspiring construction professionals.

The Visit

On a warm morning, representatives from APEX-CIPP and IPP Solutions arrived at the jobsite near Orlando to learn about the [spray-in-place pipelining process](#). Hosted by [Pipeliner Pros](#), a leader in trenchless technology, the visit aimed to provide a firsthand look at the latest advancements using the [PipeCaster Pro Micro](#) in action.

Engagement and Learning

The day began with a comprehensive briefing, ensuring that all participants were aware of the protocols and equipped with all necessary equipment and materials. APEX-CIPP and IPP Solutions were then introduced to the [Pipeliner Pros](#) team, who explained the project's scope and the benefits of spray-in-place pipelining.

Divided into multiple jobsite visits, APEX-CIPP and IPP Solutions rotated through various projects, each demonstrating a different phase of the pipelining process. They observed the initial inspection using [camera systems](#), the cleaning of the pipes to remove debris, and the application of the spray-on liner. The professionals explained the technical aspects, such as the composition of the liner material and the equipment used to apply it.

Impact and Outcomes

The jobsite visit was a transformative experience for all parties. Seeing the PipeCaster Pro Micro in action and understanding its practical applications deepened everyone's appreciation for innovative solutions in infrastructure maintenance.

For APEX-CIPP and IPP Solutions, the visit was an opportunity to inspire the next generation of engineers and construction professionals. The hands-on experience and detailed explanations provided by Pipeliner Pros were invaluable in showcasing the potential of spray-in-place pipelining technology.

For APEX-CIPP and IPP Solutions, the visit was not just a routine event, but rather a significant opportunity to inspire and motivate the next generation of engineers and construction professionals who will shape the future of the industry.
